

**國立臺灣海洋大學河海工程學系 2002 工程數學 (四) 第一次作業小考 參考解答**

1. Solve the PDE  $u_x - u_y = 0$  for  $u(x, y)$ , subject to  $u(s, 0) = s^2$ .

Sol.

$$du = \frac{\partial u}{\partial x}dx + \frac{\partial u}{\partial y}dy$$

$$du = u_x dx + u_y dy$$

$$0 = u_x - u_y$$

$$\begin{cases} dx = 1 \\ dy = -1 \\ du = 0 \end{cases} \Rightarrow \begin{cases} \frac{dx}{dt} = 1 \\ \frac{dy}{dt} = -1 \\ \frac{du}{dt} = 0 \end{cases} \Rightarrow \begin{cases} x = t + x_0 \\ y = -t + y_0 \\ u = u_0 \end{cases}$$

$$x_0 = s, y_0 = 0, u_0 = s^2,$$

$$\therefore \begin{cases} x = t + s \\ y = -t \\ u = s^2 \end{cases}, \text{ then } u(x, y) = x^2 + 2xy + y^2 = (x + y)^2$$

2. Solve the PDE  $2u_x + 3u_y = 4$  for  $u(x, y)$ , subject to  $u(2s, 3s) = 5$ .

Sol.

$$du = u_x dx + u_y dy$$

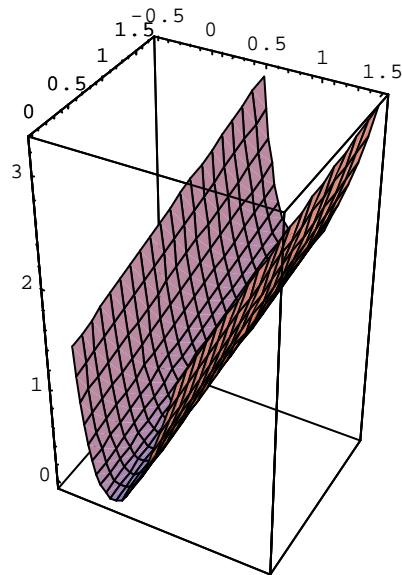

$$4 = u_x \cdot 2 - u_y \cdot 3$$

$$\begin{cases} dx = 2 \\ dy = 3 \\ du = 4 \end{cases} \Rightarrow \begin{cases} \frac{dx}{dt} = 2 \\ \frac{dy}{dt} = 3 \\ \frac{du}{dt} = 4 \end{cases} \Rightarrow \begin{cases} x = 2t + x_0 \\ y = 3t + y_0 \\ u = 4t + u_0 \end{cases}$$

$$x_0 = 2s, y_0 = 3s, u_0 = 5,$$

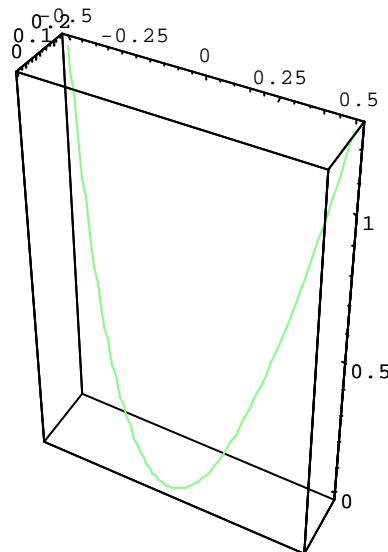

$$\therefore \begin{cases} x = 2t + 2s = 2(t + s) \\ y = 3t + 3s = 3(t + s) \\ u = 4t + 5 \end{cases}, u(x, y) = ?$$
